

# Working with DomJudge

For this competition we use a DomJudge server. Go to <http://clover.science.uu.nl/dj>

Here you can log into your account, for which you have received a separate sheet with login data by the organisers. Then your browser should look something like this (without the arrows):

At Problems (arrow 1) you can take a look at the problems in this competition.

At Scoreboard (arrow 2) you can see the current leaderboard. The faster you submit correct solutions, the higher on the scoreboard you will appear. If you have submitted a good solution, a green box will appear for that problem. If you are the first team to solve it, it will be a darker shade of green.

At submit (arrow 3) you can submit a new solution to a problem. Make sure you upload the good file and select the right problem and language.

At request clarification (arrow 4) you can ask questions to the organisers about the solutions you have submitted or about the problems or contest in general. We will answer as soon as possible!
